Bio 황 Sulfa®

World's first and largest production

Environmentally friendly

BioSulfur

ECOBIO HOLDINGS CO.,LTD.

REF. AG181004

World No.1 PREMIUM

Agriculture, Livestock, Aquaculture

Company Overview

www.ecobio.co.kr
www.biosulfa.co.kr

To transform ***the existing***
To create ***the nonexisting***
And forge ***sustainability!***

CEO	Hyo-Soon Song
Academic	Keimyung University, Environmentology
1989	Founding of EcoBio Holdings Co., Ltd.
2005	Chairman of Bio-division of New & Renewable Energy Association
2013	Received Presidential Prize for Renewable Energy Award
2015	Present Auditor of New Renewable Energy Association
2016	Current EcoBio Holdings CEO
2018	Korean Scoiety of Clean Technology Vice-Chairman

Company Name: EcoBio Holdings Co., Ltd. (KOSDAQ 038870)

Corporate Registration Number : 122-88-01030

Headquarters : 5, Seoun-ro 26-gil, Seocho-gu, Seoul

Factory : 61, Geowol-ro, Seo-gu, Incheon

Tel. : 02)3483-2900 **Fax** : 02)3483-2929

Email : biosulfa@ecobio.co.kr

Homepage : www.ecobio.co.kr

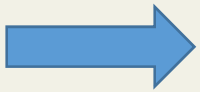
2016	EcoBio Holdings Co., Ltd.
2013	Presidential Award for Excellence
2012	Awarded the highest prize by a company specializing in the recycling of waste energy resources - Minister of Environment
2008	Goldman Sachs U.K attracts $ 28 million in foreign capital
2007	KOSDAQ Listed
2002	Joined Korea Renewable Energy Association
1989	Founding of EcoBio Holdings (previous TotalENS)

Benefits of Sulfur

Essential Nutrients	Important constituent of our bones, skin, and hair
Skincare	Plays an important role in skin cells and tissues
Constipation	Can help to improve constipation through diuretic action
Constitution	Improves muscles and bones Prevents balding and promotes hair growth
Insulin and Hormones	Activates insulin hormones Effective in controlling diabetes
Detoxification	Detoxifies carcinogenic and disease-causing sources

Effects of Sulfur on People

20th century – the age of "Vitamins"



21st century – the age of "BioSulfa"

On average, the human body has 0.2% sulfur in its weight and should be maintained at all times.
Taking 0.5 to 1mg of sulfur per kilogram of body weight is the key to good health.

Sulfur deficiency

Sulfur deficiency is a major cause of baldness, keratinization of nails, toenails, as well as skin aging
Due to sulfur's detoxification ability, it is also called the antidote of the 21st century.

Beauty Mineral

Sulfur is a main component of amino acids that make up enzymes that affect collagen, a molecule that maintains the elasticity of the skin.
It is effective enough to be called beauty minerals

Sulfur
Effects on the human body

Detoxification

Detoxification ability of heavy metals, chemicals , various pesticides, yellow-dust, etc.
Helps in releasing heavy metals such as yellow-dust, car fumes, seasonings, pesticides etc. from the body

Other qualities

Suppresses increase in blood cholesterol
Improves decomposition of platelets and improves sperm activity
Has anti-cancer and inhibitory effect
Anti-parasitic activity

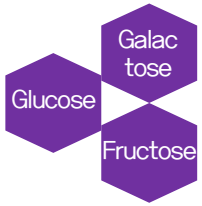
Effects of Sulfur animal feeds on livestock(1/2)

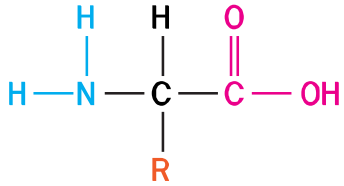
Meat Quality Improvement	**Tested on meat quality of cow , pigs, ducks, and chickens. High quality meat produced and approved** (Increase in sirloin cut size with 20% decrease in fat layer)
Collagen Proteins	Richer meat broth and improved meat texture through increase in collagen proteins
Cholesterol	Decrease in overall cholesterol and increase in unsaturated fatty acids
Endocrine-Disrupting hormones	Helps alleviate build-up of endocrine-disrupting hormones Decreased build-up of heavy metals in muscles
Livestock Disease Control	**Decreased livestock death due to increase in immunity, preventing disease outbreaks** (rate of gain increased by 5~67% in all livestock, increased effectiveness of feed by 3~5%)
Reduces need of antibiotic administration, excellent deodorizer	

Effects of Sulfur animal feeds on livestock(2/2)

Odor Removal	When cooking, the fishy smell of meat is replaced by a savory scent
Oil solidification	Oil after cooking does not solidify and the taste of the meat does not change after cooling.
Meat Tenderness	The meat is becomes tender and dryness of breast meat is reduced.
Meat Quality	Animals that consume sulfur create a white broth when boiled for stock, creating a light and clean quality
Effective detoxification effect	Removes heavy metals, agrochemicals, and growth hormones

Advantages of BioSulfa to livestock





Nutrient	Carbohydrate	Protein	Mineral (Metal component)
Absorption type	Smallest size Monosaccharide	Amino acid	Smallest size Single molecule

The effect of sulfur as feed additive is **closely related to the size of the sulfur incorporated.**
A simple structure of sulfur compounds can be easily absorb to both animals and plants.

BioSulfa is highly probable for absorption by livestock,

Because of its small size (1 to 4㎛) compared to conventional sulfur (chemical sulfur, 400㎛)

Effect of Sulfur on Crops

- Improves crop growth through sterilization and disinfection action
- Improves nourishment supply through soil sterilization
- Improves resistant to disease and pests for environmentally friendly farming

Environmentally friendly farming = Increases income of farm, balanced development of industry

→ Healthy public

Vision

Although sulfur has been used in agriculture since centuries ago, the toxicity of sulfur has prevented it from extensive use However, Biosulfa produced by microbial metabolism is expected to attract worldwide attention as eco-friendly new agriculture. Biosulfa, which helps soil sterilization and crop growth as well as being highly efficient, is expected to accelerate the expansion of the eco-friendly agriculture.

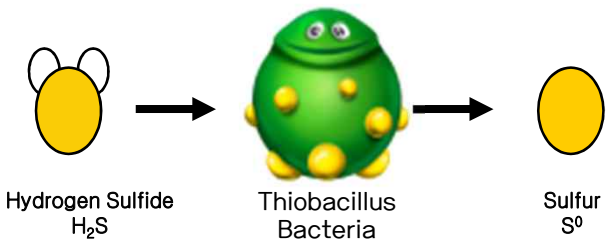
What is BioSulfa?

Biologically produced!

BioSulfa

- Solves the toxicity problem of chemically produced sulfur.
- Biologically produced by microbial digestion (eco-friendly)
- Combines the benefits of sulfur and microorganisms
- Can use in agriculture, livestock, and aquaculture

※Biosulfur production process within the Bioreactor



Thiobacillus breakdown of hydrogen sulfide by bacterial metabolism

Applications of BioSulfa

Agriculture
Soil improvement, winter control, foliar spray

Livestock
Development of animal feed

Aquaculture
Good replacement of currently used antibiotics

And much more!
Medicine, cosmetics, deodorizer, etc

Definition of BioSulfa

BioSulfa is an ECO-Friendly Organic Product that is produced naturally by microorganisms and can be classified as an Organic Sulfur Compound.

- Production by microbial metabolism
- The presence of sulfur (S) and carbon (C) in the same molecule
- Eco-friendly product

※ The classification of organic sulfur compounds or inorganic sulfur compounds depends on coexistence of sulfur (S) and carbon (C) within the same molecule.

* Organic sulfur compounds : C+H+O+N+S / Inorganic sulfur compounds : S+O

Comparison between BioSulfur and chemical sulfur

Certified Organic Material
(Post No. 1-6-014)
(Certification No. 1-6-002)

VS

Category	Bio Sulfur (suspended concentrate)	Petrochemical Sulfur (solid)
Definition	Bio sulfur produced from microbial metabolism	Chemical sulfur derived from chemical reactions
pH	Slightly Alkaline (pH 8.5) suspension	Not soluble in water
Sulfur Conc.	40% ± 3% (suspension)	100% solid powder
Density	1.35 g/cm^3	1.95 ~ 2.26 g/cm^3
Particle Size	1~10 ㎛ particles (high fungicidal effect)	400~600㎛ (low fungicidal effect)
Hydrophilicity	Pharmacological cocktail effect (Hydrophilic-like, can be mixed with other substances)	Not compatible with other chemicals (Highly hydrophobic, can not be mixed with other substances))
Characteristics	Naturally suspended state, easily suspended in water User in organic fertilizers, pesticides, cosmetics and pharmaceuticals Harmless to insects	Not soluble in water, needs caustic soda and surfactant for suspension Used in chemical fertilizer Can cause metal corrosion, generates toxic gas and can reduce the lifespan of plastic materials

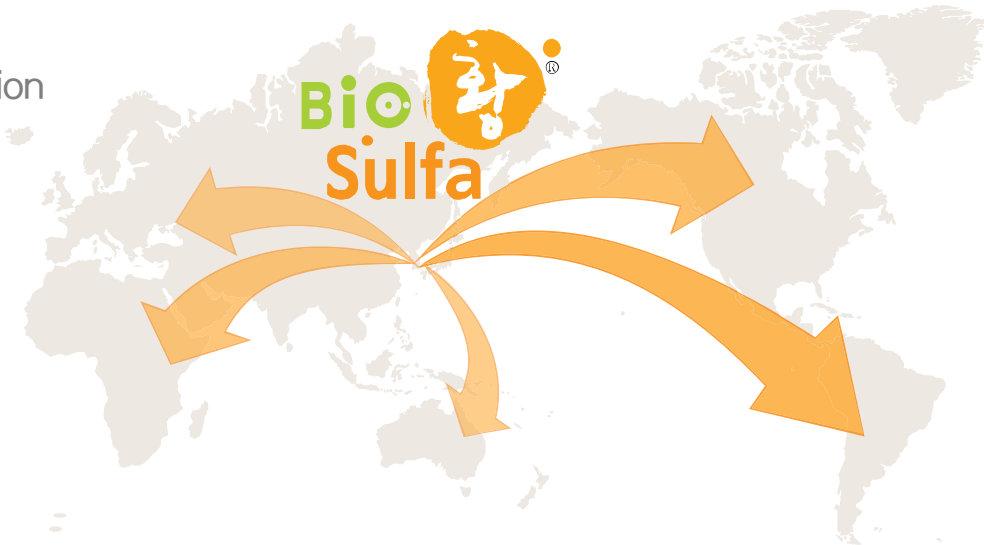
Market Value of BioSulfa

Of the entire **Sulfur** production in the world

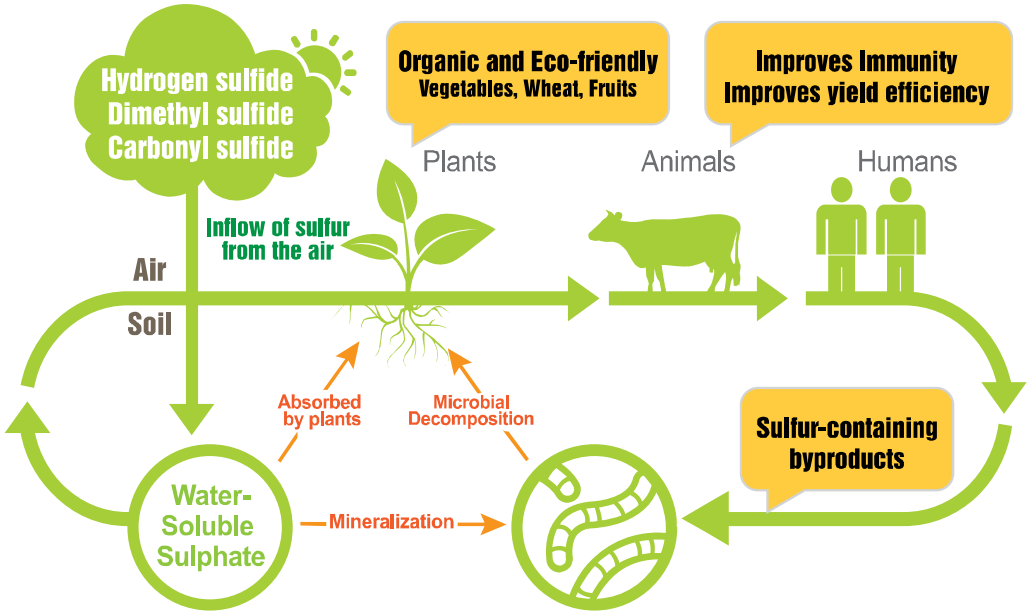
Only 0.0001% of it is BioSulfa!

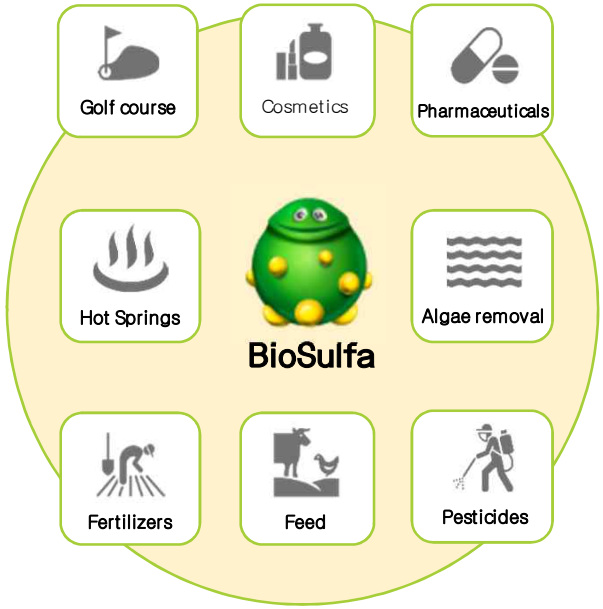
High in scarcity value

- World's largest biosulfa production facility
- First domestic biosulfa production and commercialization
- The only domestic technology for production biosulfa



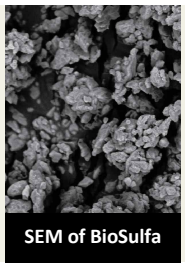
BioSulfa Cycle





Agricultural BioSulfa (fungicide) → raw material for daily supplies→
raw material for cosmetics → raw material for medicine

Used for Various Purposes



SEM of BioSulfa

BioSulfa combines the benefits of microbial digestion and sulfur
to create an eco-friendly product of the highest quality.
Over 30,000 farmers have experienced its advantages

Vision of BioSulfa in Agriculture, Livestock and Aquaculture

Global Market for Environment Friendly Fertilizer/Fodder

Zero Chemicals

Organic

BioSulfa

Environment friendly	Production expansion	Strengthen competitiveness
ZERO Pesticide	Specialized farming techniques	Stable returning to farming
Preserve land and secure safe food by implementing pesticide-free	Competitive fertilizer and livestock industry	Contribute to economic revitalization of agricultural and fishery by stable cultivation

Feasibility of entering BioSulfa fertilizer market (market environment) (1/2)

Problems of using existing chemical fertilizer

- Between 1960 and 2000, the use of chemical fertilizers increased about 800% globally.
- The use of chemical fertilizers is continuously increasing due to the success of chemical fertilizers such as nitrogen and phosphoric acid.
- Excessive acidification of soil due to the effect of acid rain by overspray and industrialization.
- The acidification of soil brought acidification of the plants, so that humans body is also affected Most pathogens breed well in acid, so that pests outbreak on acidic soil and .
- Excessive nitrogen in chemical fertilizers generates large amounts of greenhouse gases, accelerating climate change. ("About 1/4 of total nitrous oxide emission, one of global warming material, is known as "results of agricultural activities using chemical fertilizers.")

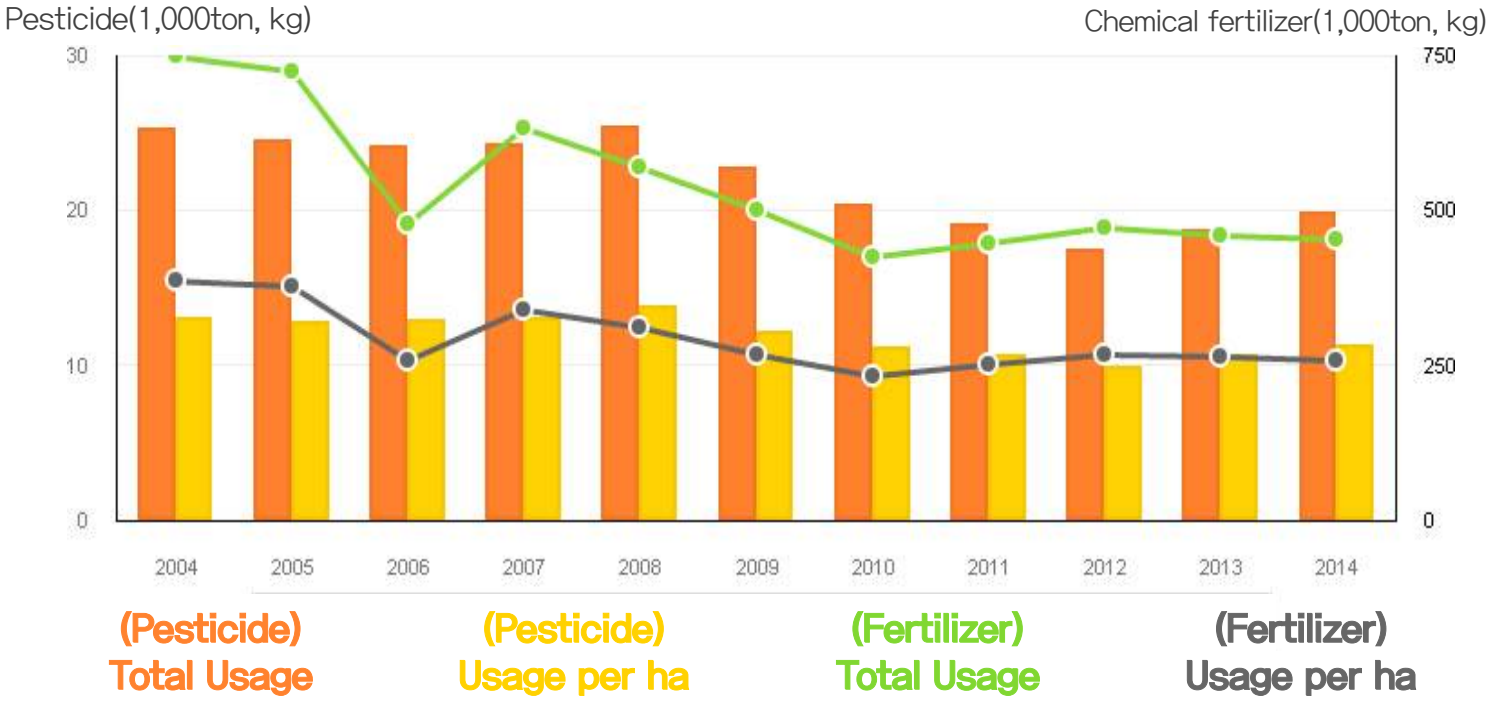
Feasibility of entering BioSulfa fertilizer market (market environment) (2/2)

The crisis of existing agriculture

Acidification of soil	• Soil becomes strongly acidic (pH 5.0 ~ 5.5) by excessive use of chemical fertilizer, pesticides, heavy metals in the dust. • Organic and nutrient content is low. (Soil organic content : 2.4% in Korea) • Zero chemical agriculture, organic farming, were tried, however productivity and wide availability are low. → **It is not a fundamental way to solve the problem.**
The aging of the agricultural population	• Aging of agriculture population is serious due to concentration of population and low birth rate. • Agricultural population decreased continuously.
FTA	• The crisis of agriculture industry due to the liberalization of export and import of various agricultural products. • Need to change into organic and qualified product.

Agricultural and chemical fertilizer usage (Korea)

‹ Usage of pesticides and chemicals ›



▶ Serious soil acidification due to excessive fertilizer/pesticide usage.

▶ Need to find a way to solve soil acidification problem.

* Source: Ministry of Agriculture, Forestry and Livestock Foods
* Note: Chemical fertilizer usage is based on agricultural standards (excluding industrial use and export use)
* Usage of fertilizer and pesticide is classified by nationwide only.

Effect & Necessary of BioSulfa

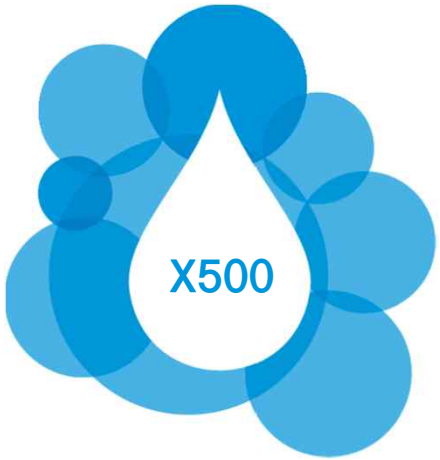
Consumer
- Safe food
- Delicious food
- Fresh food
- Residual pesticide-free food
- Domestic agricultural products

Farmers
- Increase product quantity
- Continuous cultivation
- Increase income
- Production of high quality agricultural products
- Consumer satisfaction

Distributor
- Securing qualified agricultural products
- Extension of expiration date
- Safe product supply
- Increase profitability

Government
- Development of competitive agricultural technology
- Protection of Primary Industry from FTA
- Environmental protection
- Export of agricultural technology

How to use BioSulfa



On growing crops
Ratio (500-fold dilution)
Foliar treatment

* Material for organic products
* Hydrophilicity ensures safe use and mixing convenience
* Provide essential ingredients for plants growth
* Small particle size allows spray

※ Shake it sufficiently before use. Adjust spraying interval and concentration depending on soil, crop conditions and environment situation.

BioSulfa

Effects, Applications, and certification

Biosulfur has different properties to chemical sulfur,
making biosulfur unique to widely available sulfur.

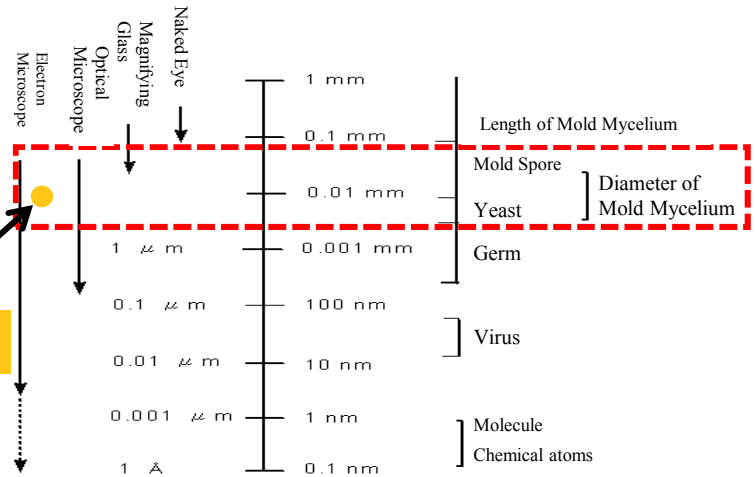
Fungicidal effects of BioSulfa

Why So Effective?

1) Optimal Particle Size : 1~10 ㎛
2) Particle Size Optimal for Sterilizing Mold Spores
3) Germs and viruses are smaller than **BioSulfa** particles

Conditions for Optimizing BioSulfa effects

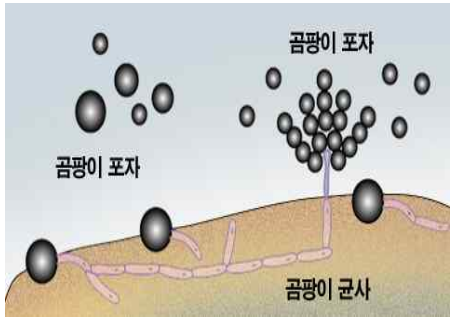
1~10 ㎛

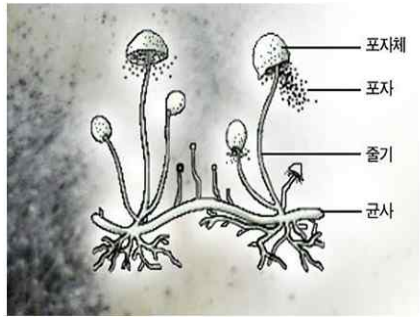


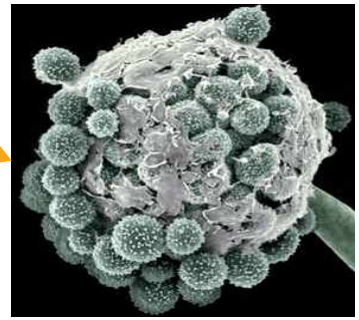
BioSulfa's fungicidal effect

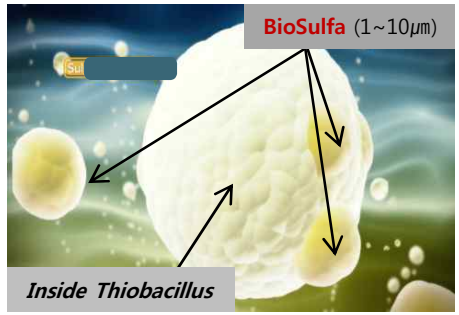
1) Fungi reproduce through spores ➔ can maintain spores through unfavorable conditions
2) Regular sulfur has larger particle size than fungi ➔ can't reprevent reproduction

Existing pesticides ➔ Increase pesticide resistance
BioSulfa ➔ highly effective ➔ no build-up of resistance









Effects of BioSulfa

PEOPLE

- Detoxify heavy metals
- Helps maintain skin elasticity
- Helps lower cholesterol and degrade platelets.
- Helps bones grow stronger
- Removes inflammation and kills germs
- Used to help treat diabetes
- Helps to alleviate constipation

LIVESTOCK

- Meat becomes tender
- Removal of unique odor
- High content of unsaturated fatty acids
- Slow oil solidification for fat
- Nutritious animal feed
- Good for digestion (helps stamina)

CROPS

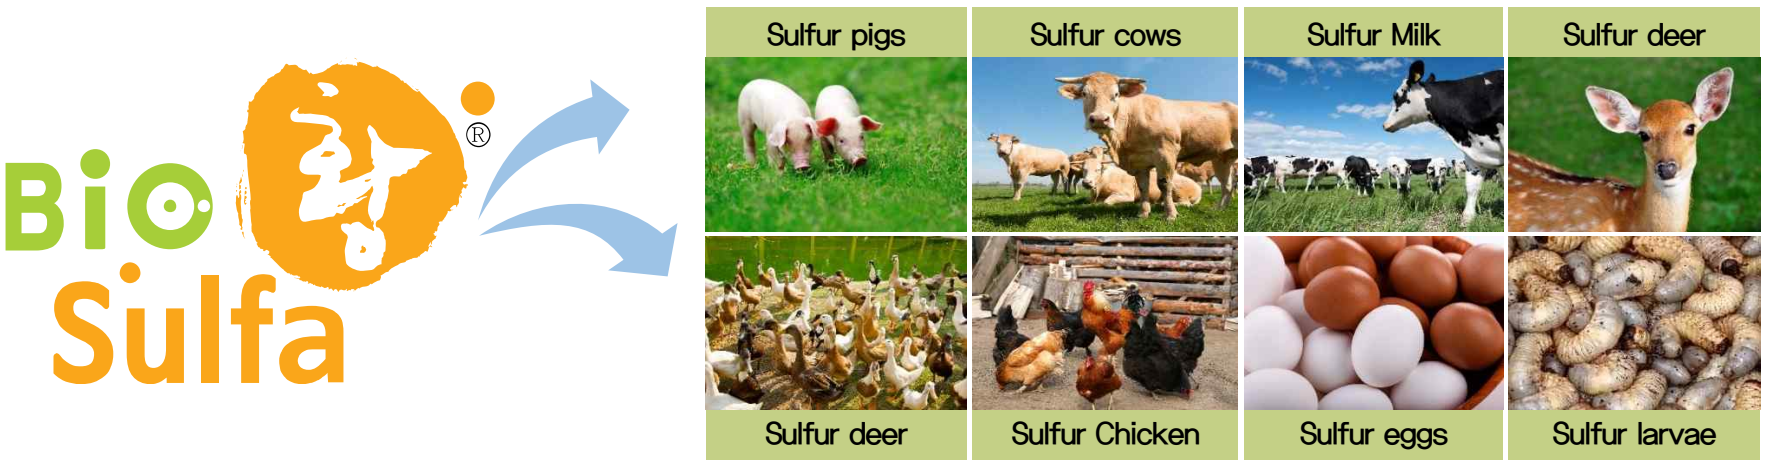
- Improves crop growth through sterilization and disinfection action
- Improves nourishment supply through soil sterilization
- Improves resistant to disease and pests for environmentally friendly farming
- Contributes significantly in increasing farm income
- Winter control, soil sterilization, foliar spray etc.
- Improves color, scent, and taste of fruits

Use of BioSulfa

Safe to use in agriculture, livestock, and aquaculture

Sulfur pig, sulfur cows, sulfur ducks, sulfur chickens, sulfur eggs, sulfur deer, sulfur larvae and sulfur mudfish, etc.

The possibility of non-antibiotics in agriculture, livestock, and aquaculture begins with **BioSulfa!**



Comparison of Safety of BioSulfa and processed Sulfur

"processed" Sulfur < BioSulfa "superior safety standards"

(units : ppm)

Category	Permissible Standard	BioSulfa Taken from Korea Testing & Research Institute 2016.10.10 results	Processed Sulfur Taken from Konkuk University, College of Animal Bioscience & Technology
S(Sulfur)	-	50.8%	98.34%
Pb(Lead)	3.0	Undetected	1.32
Cd(Cadmium)	3.0	Undetected	0.06
As(Arsenic)	3.0	Undetected	Undetected
F(Fluorine)	3.0	-	0.09
Hg(Mercury)	3.0	Undetected	Undetected
Cr(Chromium)	3.0	Undetected	0.06
Se(Selenium)	3.0	50.8%	0.05

Efficacy of on BioSulfa on chicken mite

시 험 성 적 서

시험책임자	양 병 근
시험담당자	이 재 선

접수일자	2018. 08. 29.	접수번호	01-18-008
시 료 명	T0	시험대상	*Dermanyssus gallinae*
제조일자		시험구분	*D. gallinae* 사멸율 실험
의 뢰 자	에코바이오홀딩스	소 재 지	서울특별시 서초구 서운로 26길 5
의뢰내용	"T0" 시료의 *D. gallinae* 사멸율 확인		

귀하께서 우리 팜씨큐 연구개발센터에 의뢰한 시료에 대한 시험결과는 다음과 같습니다.

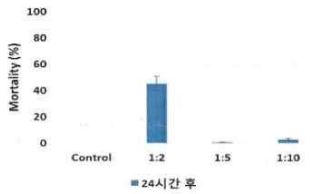
시험방법 및 결과

시험방법

① 약제노출 후 사멸율 (mortality, %) 측정
② *D. gallinae* 성충 100마리, 알 20개 접종, 3회 반복 실험 수행
③ 실험농도 : 1:2, 1:5, 1:10
④ 약제 농도별 *D. gallinae* 사멸율 (mean±SE, %) 측정

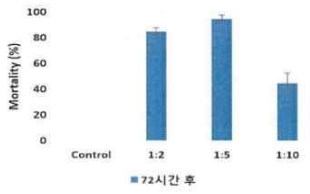
결 과

① T0 성충 농도별 사멸율(Mortality, %) 측정 결과



성충 결과 (*In vitro*)	처리 후 결과 (Mortality ± SE)
T0	24시간 후
1:2	45.6 ± 5.4
1:5	0.8 ± 0.4
1:10	3.1 ± 0.8
Control	0.0 ± 0.0

② T0 알 농도별 사멸율(Mortality, %) 측정 결과



알 결과 (*In vitro*)	처리 후 결과 (Mortality ± SE)
T0	72시간 후
1:2	85.0 ± 2.9
1:5	95.0 ± 2.9
1:10	45.0 ± 7.6
Control	0.0 ± 0.0

③ 실험 결과 분석
- 의뢰받은 T0 시료에 대한 성충 실험결과, 24시간 후에 1:2 희석배율에서 45.6% 의 사멸율을 보였고, 1:10에서는 3.1% 의 사멸율을 보였다. 1:2 희석액을 살포하면 물보다는 약간 점도가 있었으며, 뿌린 뒤 말랐을 때 갇혀죽은 개체가 많았다. 실험자의 의견으로 1:2의 경우 화학적 기작이 아닌 물리적 기작으로 *D. gallinae*를 죽였을 가능성이 높다.
- 알 실험 결과, 1:2배 희석배율에서 85.0%의 사멸율을 보였고, 1:10에서는 45.0%의 사멸율을 보였다. 1:2보다는 1:5에서 더 효과가 좋았다.

비고 : 상기 시험성적은 의뢰자가 제공한 시료에 대한 결과이며, 시료명은 의뢰자가 제시한 것입니다. 본 성적서는 시험의뢰 목적이외의 광고, 선전 등 상업적인 용도나 법적인 해결의 용도로 사용할 수 없고 임의로 시험성적서를 변형할 수 없습니다.

BioSulfa25 efficacy test of Powdery mildew control on Oriental melon (*Cucumis melo L. var. makuа*)

T.N: GET1806-15

Trial of organic agricultural materials against Powdery mildew on Oriental melon

KOREA BIO-SAFE

KBSI (Korea Bio Safety Institute)

[2018.07.23] Chungbuk Eumseong-gun, Saenggeuk-myeon
82.7% control effect of powdery mildew on Korean melons observed

KBSI (주) 한국생물안전성연구소

1. Objectives

This test is intended to serve as an organic agricultural materials quality certification registration materials for Powdery mildew on Cucumber.

2. Materials and Methods

a. Methods of the phytotoxicity and efficacy testing shall be follow to the notification of RDA(Rural Development Administration)
b. Target diseases : Powdery mildew(*Sphaerotheaca fusca*)
c. Host(race) : Oriental melon(chammaseuncheonchamoe)
d. Incidence of target diseases : 20.2% disease severity of average in untreated control was sufficient to review the efficacy.
e. Treatment of chemicals

Chemicals	Content (%)	Efficacy		Phytotoxicity		Sponsor
		Dilution/Dosage	Method	Standard	Double dosage	
Ecobiosulfur25	Sulfur 55.6	1,000	When the initial of diseases occur, to spray 3 times at interval of 10 days (6/12, 6/22, 7/2)	1,000 (6/12)	500 (6/12)	Ecobio holdings
Untreated control	-	-	-	-		-

f. Cultural practices : Cultivation under structure. Semiforcing culture. 200×45 interval transplant at 15th February 2018. vinyl mulching. During the test, it was used 'Ecobiosulfur25' chemical except another fungicides.

3. Method of assessment

Division	investigating items	Time of investigation	Date of investigation	Method of investigation
Efficacy	Disease severity	1	7/12	Investigate the disease leaf area on over 100 leaves at 10days after final treatment
Phytotoxicity	Seemingly phytotoxicity existence	3	6/15, 6/17, 6/19	Observe the phytotoxicity at 3, 5, 7days after treatment

4. Results

a. Efficacy
○ Trial of efficacy against powdery mildew on Oriental melon (10days after final treatment)

Chemicals	Disease severity(%)				Significant difference (DMRT)	Control value (%)
	I	II	III	Average		
Ecobiosulfur25	4.3	2.8	3.5	3.5	b	82.7
Untreated control	18.8	21.3	20.5	20.2	a	-
C.V.(%)	(12.0)					

5. Summary

a. Efficacy
○ Ecobiosulfur25 exhibited a superior control effect over 82.7% compared to untreated control.
b. Phytotoxicity
○ Ecobiosulfur25 were not phytotoxicity in standard and double dosage.

6. Discussion

○ The result of this study indicates the Ecobiosulfur25 is available at an organic farming material since there was no phytotoxicity and exhibited a superior control effect over 82.7% compared to untreated control in Oriental melon. So, this is considered to be practical against powdery mildew.

BioSulfa25 efficacy test of red spider mite control on apples

T.N: GET1806-18

Trial of organic agricultural materials against red spider mite in apple orchard

KOREA BIO-S

KBSI (Korea Bio Safety Institute)

[2018.07.23] Gyeongsangbuk-do Yecheon-gun Yecheon-eup
52.1% control rate of red spider mites on apples observed

KBSI (주) 한국생물안전성연구소

1. Objectives

This is intended to serve as an organic agricultural materials quality certification registration materials for red spider mite in apple orchard.

2. Materials and Methods

a. Methods of the phytotoxicity and efficacy testing shall be follow the procedure given in RDA(Rural Development Administration)

b. Target insects: Red spider mite(*Panonychus ulmi*)

c. Host(race): Apple(Fuji)

e. Incidence of target insects: The 140.0 of target insects in untreated control at before treatment was sufficient to review the efficacy.

f. Treatment of chemicals

Chemicals	Content (%)	Efficacy		Sponsor
		Dilution/Dosage	Method	
Biosulfur25	Sulfur 55.6	1,000	When initial occurrence, to spray 1 time (6/20)	Ecobio Co., Ltd.
Untreated control	-	-	-	-

g. Cultural practices: Cultivation of bare ground. Slender spindle bush form(type). eleven-years. 4×1.5m interval trees. During the test, it was used only 'Biosulfur 25' chemical that except another pesticides.

h. Plot design: Completely randomized design with 3 replication

Division	Treats	Replicates	Total area	Number of tree	Number of trees to use	The total number of trees to use
Efficacy	2	3	6	1	6	6

3. Method of assessment

Division	Investigating items	Time of investigation	Date of investigation	Method of investigation
Efficacy	Survival rate	3	6/12, 6/19, 6/26	Investigate the mites on 30 leaves before treatment and at 7, 14days after treatment

4. Results

a. Efficacy

○ Trial of efficacy against red spider mite in apple orchard(7days after treatment)

Chemicals	Density of before treatment	Survival rate(%)				Significant difference (DMRT)	Control value (%)
		I	II	III	Average		
Biosulfur25	130.0	67.8	44.4	51.1	54.4	b	52.1
Untreated control	140.0	112.5	106.0	122.4	113.6	a	-

C.V.(%) ---------- (12.3)

○ Trial of efficacy against red spider mite in apple orchard(14days after treatment)

Chemicals	Density of before treatment	Survival rate(%)				Significant difference (DMRT)	Control value (%)
		I	II	III	Average		
Biosulfur25	130.0	64.4	43.0	48.2	51.9	b	57.8
Untreated control	140.0	119.5	117.4	132.2	123.0	a	-

C.V.(%) ---------- (11.1)

5. Summary

○ Biosulfur25 exhibited a superior control effect over 52.1% compared to untreated control.

6. Discussion

○ The result of this study indicates the Biosulfur25 is available at an organic farming material. So, this is considered to be practical against red spider mite.

BioSulfa25 Acute contact toxicity test for honeybees

BioSulfa

Crop test results

Test results on various crops as well as observations notes.

Benefits of utilizing Sulfur in agriculture

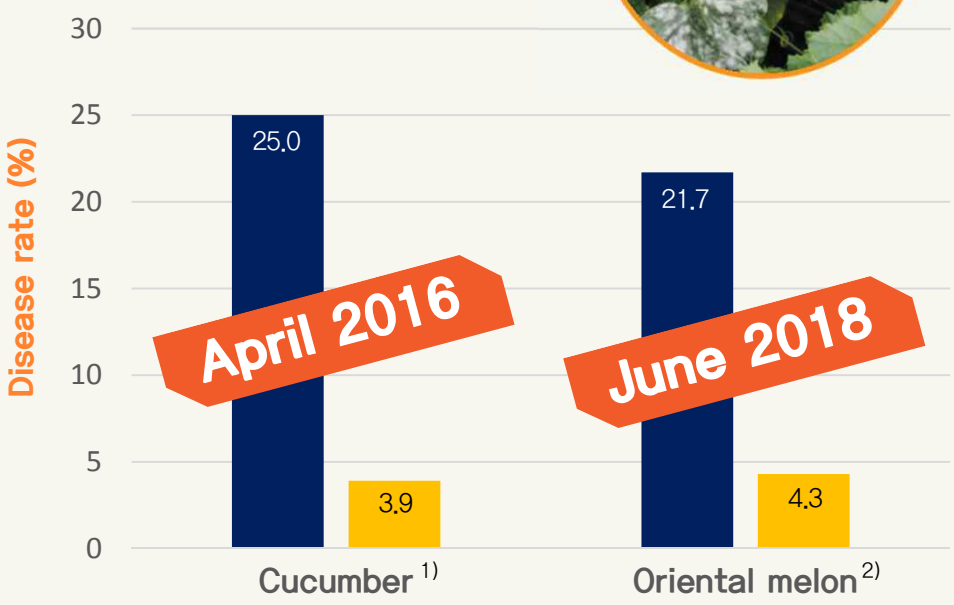
- Healthy crops due to immunity improvement
- Minimization of the reliance on protective agent
- Increase of yield (Increase of organic matter content)
- Universalization of eco-friendly agricultural techniques (Environment improvement)

High Value
"BioSulfa"

Summary of BioSulfa efficacy on Powdery Mildew and Mites

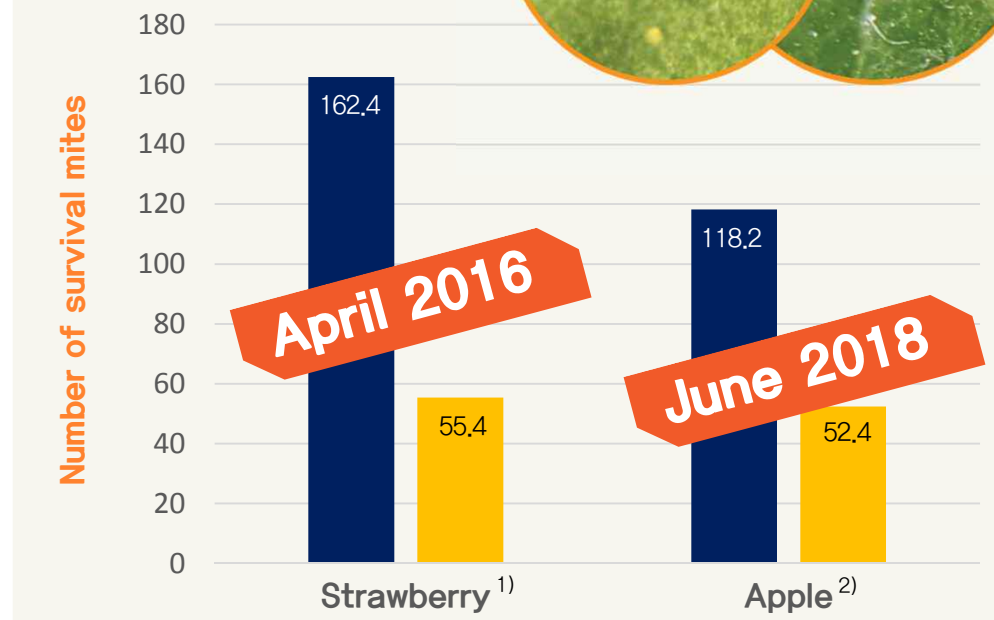
■ No treatment ■ Treatment

Powdery mildew



1) Cucumber (2016.04.08~2016.05.29) 2) Oriental melon (2018.06.12~2018.07.12)

Mites



1) Strawberry (2016.04.26~2016.05.10) 2) Apple (2018.06.12~2018.07.04)

KBSI (주) 한국생물안전성연구소 **Performed by the Korea Bio-Safety Institute**

Certified Institute Test of BioSulfa on Powdery Mildew and Mites(1/4)

Performed by the Korea Bio-Safety Institute / Cucumber 2016.04.08~05.08 (Ipjang), 2016.04.29~05.29 (Namseon)

Crop	Targets	Results	Treatment Images
Cucumber	• Phytotoxicity • Powdery Mildew *(Sphaerotheaca fusca)*	• Standard dilution(x1,000) and double dosage dilution(x500) were applied • 3 times Foliar Spraying after breakout in every 10 days • **85% efficacy** on powdery mildew at Ipjang farm • **83.6% efficacy** on powdery mildew at Namseon farm • Greenhouse conditions • Test was carried out at 3 different region at same time during 30 days • **No phytotoxicity** in standard dose and double dosage.	 〈 test photo 1 〉  〈 Test photo 2 〉  〈 test photo 3 〉  〈 Phytotoxicity test result 〉 (3, 5, 7 days after treatment)

Certified Institute Test of BioSulfa on Powdery Mildew and Mites(2/4)

Performed by the Korea Bio-Safety Institute / 2018.06.12-2018.07.12 (Namseon, Saengguk)

Crop	Targets	Results	Treatment Images
Oriental melon	• Phytotoxicity • Powdery Mildew *(Sphaerotheaca fusca)*	• Standard dilution(x1,000) and double dosage dilution(x500) were applied • 3 times Foliar Spraying after breakout in every 10 days • **78.4% efficacy** on powdery mildew at Namseon farm • **82.7% efficacy** on powdery mildew at Saengguk farm • Greenhouse conditions • Test was carried out at 3 different region at same time during 30 days • **No phytotoxicity** in standard dose and double dosage.	 〈 test photo 1 〉  〈 Test photo 2 〉  〈 test photo 3 〉  〈 Phytotoxicity test result 〉 (3, 5, 7 days after treatment)

Performed by the Korea Bio-Safety Institute / 2016.04.26~2016.05.10 (Gamgok)

Crop	Targets	Results	Treatment Images
Strawberry	• Phytotoxicity • Mite *(Tetranychus urticae)*	• Standard dilution(x1,000) and double dosage dilution(x500) were applied • 1 time Foliar Spraying after breakout • **65.9% efficacy** on strawberry mite at Gamgok farm • Test was carried out at 3 different region at same time during 14 days • **No phytotoxicity** in standard dose and double dosage	 〈 test photo 1 〉  〈 Test photo 2 〉  〈 test photo 3 〉  〈 Phytotoxicity test result 〉 (3, 5, 7 days after treatment)

Certified Institute Test of BioSulfa on Powdery Mildew and Mites(4/4)

Performed by the Korea Bio-Safety Institute / 2018.06.12-2018.06.26 (Yecheon), 2018.06.20-2018.07.04 (Gamgok)

Crop	Targets	Results	Treatment Images
Apple	• Phytotoxicity • Mite *(Panonychus ulmi)*	• Standard dilution(x1,000) and double dosage dilution(x500) were applied • 1 time Foliar Spraying after breakout • **57.8% efficacy** on apple mite at Yecheon farm • **62.1% efficacy** on apple mite at Gamgok farm • Test was carried out at 3 different region at same time during 14 days • **No phytotoxicity** in standard dose and double dosage.	 〈 test photo 1 〉  〈 Test photo 2 〉  〈 test photo 3 〉  〈 Phytotoxicity test result 〉 (3, 5, 7 days after treatment)

Farm test of BioSulfa on oligonychus punicae for avocado (Peru)

Biosulfa test on oligonychus punicae control for avocado

April 2018

〈 Efficacy on oligonychus punicae 〉

	ADA	3DDA	7DDA	13DDA
BioSulfa	49.38	5.13	2.25	0.65
SULPHA-N	43.13	23.38	17.50	12.25
OMEX SW7	43.13	6.00	2.50	0.25
SILICATO K	50.00	50.00	50.00	50.00

- Test performed with BioSulfa, SULFA-N, OMEX SW7, and SILICATO K
- BioSulfa presented significantly higher efficacy compared to other products

Farm test of BioSulfa on Phyllocoptruta oleivora for citrus (Peru) (1/2)

Biosulfa test on Phyllocoptruta oleivora control forcitrus

April 2018

〈 Efficacy on Phyllocoptruta oleivora〉

	BIOSULFA	OMEX SW7	SULPHA-N	TESTIGO

- Test performed with BioSulfa, SULFA-N, OMEX SW7, and SILICATO K
- **BioSulfa presented significantly higher efficacy compared to other products**

BioSulfa Application Example(Soil disinfection)

Lee Chang Hee (Gwangju, Gyeonggi) 2014. 04. 02
- BioSulfa was added to soil
- No effect was observed on other microorganisms.

Yang Jae Hwa (Mungyeong, Gyeongbuk) May 26, 2016
- x500 dilution was applied for sterilization
- x2,000 dilution was applied after planting

Kim Tae-Hwan (Nyongju, North Gyeongsang Province) 27.6.7
- Overeatic Soil Sterilization

Park Jung-il (Ulsan, Gyeongnam) Nov. 16, 2016
- Sterilization after Typhoon Chava

BioSulfa Application example(Winter control)

Kim Seon-mi (Gimcheon, Gyeongbuk)
- For winter control

Kim Hae-soon (Yeongcheon, Gyeongbuk) 2014. 04. 04
- x200 dilution was applied

Kim Sun-mi (Kimcheon, North Gyeongsang Province)
- Biohwang Winter Protection

Jung Moon-seok (Boeeun, North Chungcheong Province) 2016-09
Using a mixture of 500 litres of water and 1 litre of biohwang.
- 2 litres of caterpillar

BioSulfa Application example(Foliar spray application)

Kim Jong-sam (Gohung, Jeonnam) 2016. 06.27
- x200 dilution was applied
- Mite was exterminated

Son Woo Hyun (Cheongsong, Gyeongbuk)
- x250 dilution was applied
- No other fertilizer and pesticide were used

Kim Hakkwon 2017.7.27
- x1,000 dilution was applied to the second year of Fuji,
- x500 dilution was applied to fruit and the 2nd year old, 10 years old trees
- x500 dilution was applied to the fruit and the 15th years old trees
- X125 dilution was applied to fruit and bud(3 years Hongro)

High Kyung Tae (Cheongsong, Gyeongbuk)
- Black-spot disease and rust-resistant noise

BioSulfa Application Example(Vegetable leaf)

Shin Tae-soo (Gohan, Jeonnam) 2014. 04. 26
- x360 dilution was applied
- 2 times for garlic, 3 times for potato

Choi Sung-ryeol (Daejeon) 2016. 06. 12
- x500 dilution applied for ginseng

Lee Young-seok (Haenam, Jeonnam) 2016. 10 16
- Mixture of BioSulfa + rooting agent + calcium + minor elements was applied 3 times

Kim Young Soo (Gosung, Gyeongnam) 2016. 11. 28
- x2,500 was applied

BioSulfa Application example(Sulfur containing rice)

Park Seok-joon (Hampyeong, Jeonnam) 2017. 07. 23
- x30 dilution was applied
- Foliar application

Choi Sun-joo (Gwangyang, Jeonnam) 2016. 08. 10
- Scatter 500,333,250 times biohwang.
- Growing eco-friendly organic rice

Lee Chang-min (Yeongam, Jeonnam) 2016. 08. 14
- BioSulfa treatment

BioSulfa Application Example(Schizandra cultivation)

Gwang-Hyun Lee (Inje, Gangwon) 2016. 09. 14
- BioSulfa was applied 4 times
- No disease was found

Kwon Hyuk-beom (Pyeongchang, Gangwon)

Wi Kwang Hyun (Gangwon Inje) 2016
- Scatter biohwang 4
- No disease detected

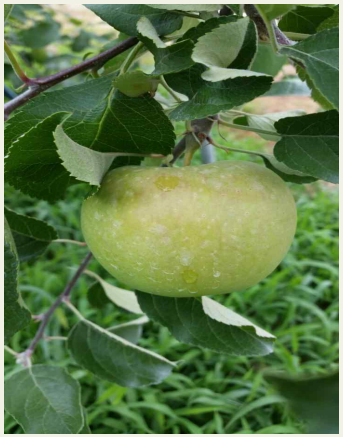
Kim, Gyeong-rye (Chungju, Chungbuk) 2017. 09. 07
- Increase yield and harvest without disease

BioSulfa Application example(Walnut tree, banana disaster)

Kang Byung-taek (Youngdong, Chungbuk) May 11, 2015
- Winter sterilization for walnut farm

Kwon-Bae (Jeju) 2017.9.14
- Prevention of banana disease
- BioSulfa was applied on banana every few days

BioSulfa Application example(Apple, Tangerine)



Kim Hak Kwon 2015. 07. 27 / 2016. 08. 20
- 1000 times the amount of biohwang, 500 times the number of beans, 250 times the birth date of 15 years

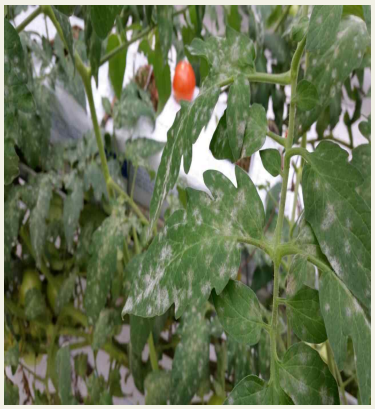
Go Dong-hee (Jeju) Aug. 20, 2015
- x2,000 dilution was applied to Karahyang
- Spraying every 5 days

Ko Kyung Tae 2016. 08. 09
- Biohwang 3rd spraying
- Grow pesticide free oil

BioSulfa Application example(Powdery mildew)

Jeong Yong-yong (Jinju, Gyeongnam) Dec. 12, 2017
- x2,000 dilution was applied

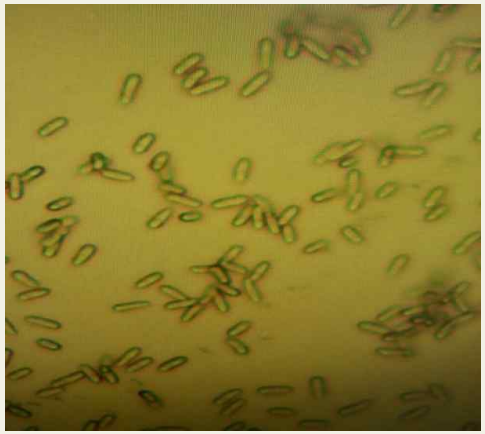
Photo after treatment

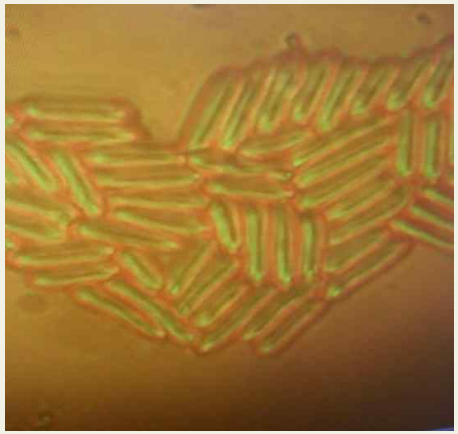


Son Byung-gwan (Iksan, Jeonbuk) 2015. 07. 21
- x2,000 dilution was applied and good effect was found

Photo after 10 days

BioSulfa application case(Anthrax)





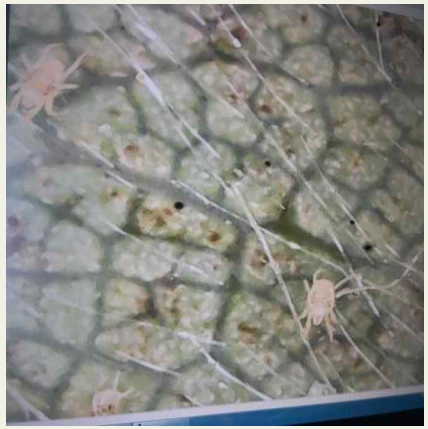
Mo Chung Yong (Muan, Jeonnam) 2017. 09. 16
- Red pepper anthrax and strawberry anthrax

Jeong Tae-Mook 2017.7.21
- Green, non-farm pesticide raspberries
- Prevention of biohwang anthrax

Lee Young-Suk (Hannam, Jeonnam)
- 200 times the amount of biohwang in anthrax

BioSulfa Application Example(Mite)

Mo Cheong-yong (Muan, Jeonnam)
- Spotted mites in cucumber
- x10 dilution was applied
- No mite was observed after treatment



Lee Jae-ryong 2016.4.5
- Using biosulfa

Kim Jong-sam 2016.6.27
- Prevention of yuja tree mites
- 200 times biohwang to remove condensation

Jeong Woo-cheol (Gongju, Chungnam) 2017. 06. 19
- Using biosulfa to treat mites

Thank You !!
